

The new WALTHER program

WALTHER's new models are good to look at. Not only because of their quietly elegant functional appearance, but also inside where, having removed the case, you inspect the finely engineered "innards" that ensure the proverbially reliable operation even under the heaviest work load.

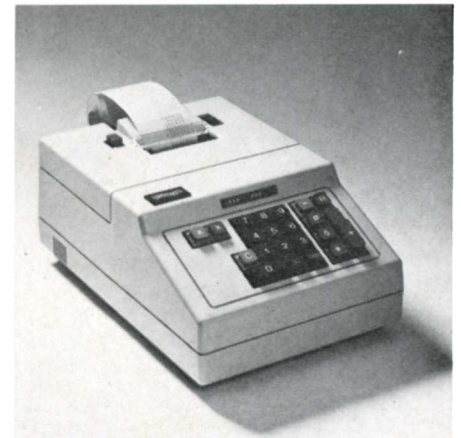

comptess

This model is ideally suited for any office where the bulk of the figuring work is adding/subtracting. Compact in size, but offering maximum speed and operating comfort.

simplex 32, duplex 32

simplex 32, a superfast, de luxe adding machine which even the fastest operator cannot outpace and which even the most gruelling workload cannot wear out. duplex 32, the same but with two registers for more versatility.

multa 33

A compact handy calculator with automatic multiplication besides addition/subtraction. Operating it is so simple you can use it without any training.

multa 32

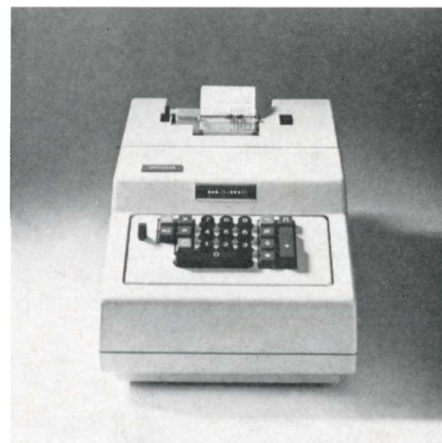

Another three-operation model but with more refinements such as a memory, superior speed and maximum operating comfort.

multa GT

It features a product memory where products can be accumulated; a constant factor and short-cut multiplication.

diwa 32

The features of multa 32 plus automatic division add up to the four-operation calculator — a truly universal all-around calculator for every office.

The WALTHER program serves every need in the field of figuring. There are machines for every requirement and figuring job: portable, desk size, fast, printing, display types, mechanical, electronic, fixed roll and wide carriage models, models for data acquisition or for figuring and printing price tags.

And, to better still match the modern office atmosphere, we have restyled the cases.

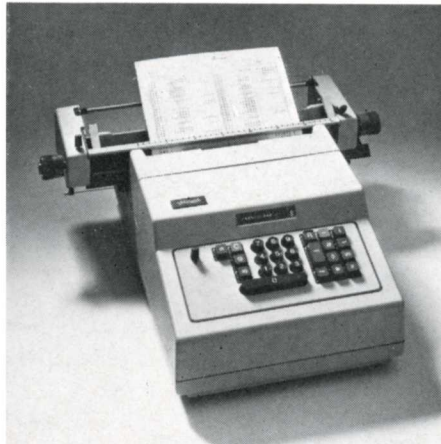

There is a WALTHER for your every figuring need. A model made to measure, offering neither more nor less than you actually need.

One thing they all have in common: the proven WALTHER precision made in Germany.

Manual and shuttle carriage machine

WALTHER system machines add, subtract and print figures on printed forms. They are available with manually positioned or shuttle carriages, and one or two registers.

Tabulating carriage machines

Models simplex 332 and duplex 332. These machines may be programmed to print automatically in more than two columns across a form. They, too, are available with one or two registers.

simplex 224 m

WALTHER OCR printers are available in a variety of models and fonts. They enable even small and medium-sized businesses to benefit from the advantages of EDP at very moderate cost.

duplex 224 m

If one register is not enough, here is an OCR printer model that has two.

ETR 2 and 3

Electronic all-purpose calculators for operation from the mains or battery.

ETR 10

High-performance printing electronic desk calculator with 2 registers, memory, a 15/30 digits' capacity, precision printing mechanism of unsurpassed print quality, and many more outstanding features.
